One-Twist Pivot Keyboard

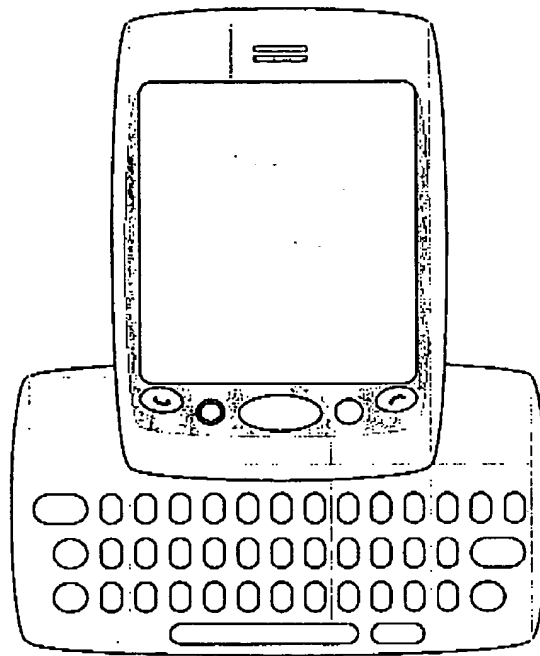

Customer No.: 31561
Docket No.: 12022-US-PA
Application No.: 10/709,897

The pivot keyboard simultaneously meets both requirements of being narrow and being wide. It upholds 1) a PDA phone's stipulation of a narrow form factor and 2) a thumb pad's requirement of a wider dimension. One uniquely-placed hinge plus two securing tracks firmly bond the two halves together as one unit. When the user pivots the device to reveal the hidden keyboard, the fluid, counter-rotary motion provides a unique sensation like opening a magic box.

Application No.: 10/709,897

The top and bottom parts do not have to have the same footprint. The pivot keyboard could represent only the partial length of the entire device.
